(54) Title: FIELD EMITTER CATHODE RACKPLATE STRUCTURES FOR DISPLAY PANELS				

(57) Abstract

Multilayer cathode backplate structures are provided for use with a field emitter in display panels. Processes for making the structures are also disclosed. The backplate structures are made of a plurality of electrodes separated by one or more patterned layers of a dielectric composition, each said patterned layer being formed by firing a thick film dielectric composition which has been patterned by diffusion patterning.
